## Innovative Method for Measurement of Oil in Anhydrous Ammonia

Introducing OSS ClearShot™ Technology to Safely, Accurately and Cost Effectively Measure Oil Content in Anhydrous Ammonia and Identify the oil within the Samples.

- Determine oil level from 0.2 to 40 ppm at any Stage of the Process
- Identify the Oils in each Sample
- Eliminate Any and All Dangerous Solvents, such as N-Hexane
- Fast, Precise and Reliable Test Results
- Reduce Costs through Chemical Savings, Risk Mitigation and Decreased Time
- Ensure product quality and performance for all downstream ammonia products
- Safe and Simple Procedure with Easy to Follow Steps
